

Species on the Edge Vocabulary Flipped Video Note-taking Sheet

While watching the video, write down the word that matches the definition in the left column. Add any additional notes you think may be helpful in the right column, such as the definition in your own words; hints to remember the word; or additional information or examples. At the bottom, write down any questions you would like to ask in class.

Word	Definition	Additional Notes This section is not required, but will be helpful
	a species that has completely disappeared	
	a species that is locally extinct (extinct in a particular state or country, but still present elsewhere)	
	a species in immediate danger of extinction	
	a species present in its range, but threatened because of a decline in numbers	
	a species not presently in danger, but of concern because of low numbers. Some species will always be rare because of their position in the food chain or because of habitat preference	
	the type of environment a species lives in (wetlands, desert, forest)	
	geographic area a species lives in (sub-Saharan Africa, the Western Hemisphere)	
	all the living things, from plants and animals to
